Subject: Microsoft Settlement

I think the proposed settlement with Microsoft as it stands is totally wrong. The company has been found guilty, even on appeal, of very serious crimes that have seriously affected the industry for many years. It's been found guilty in similar trials for similar behavior. It's punishment must now fit the crime or its past record shows it will continue it's practice of abusing market power to maintain its monopoly of the computer industry. Now it appears to be trying to dominate other industries. It's time to truly show Microsoft that it has acted outside the law and severely punish the company. Don't let them "buy their way out of jail".

I have no connection with Microsoft or its competitors.
